

MINI-KEEPER ALARMSYSTEM

SICHERHEIT GANZ EINFACH
SECURITY MADE SIMPLE

QUICK START GUIDE

Short introduction into Mini-Keeper

1. Connect power supply first with Mini-Keeper and power, load **rechargeable battery for a minimum of 5 minutes!!!**

2. Insert SIM-Card (with deactivated PIN) in slot at the top and click into place (using a ball-point pen, see drawings down right.)

After all green LEDs are lit up, call the Mini-Keeper from up to three phones (be sure to have your caller ID transmission in use!) Each time a caller ID is stored, a green LED will go out. After the 3rd storing or 180 seconds this procedure is finished.

3. Electronic key on destined field above

- set on = deactivated (unarmed), green LEDs confirm.
- taken off = activated (armed) and Countdown starts with blinking.

At the offset of the alarm, Mini-Keeper calls the stored caller IDs in succession until one of these calls is accepted or refused manually. He will repeat the process after 180 seconds if motions were detected again.

Further information at www.mini-keeper.com
or in the manual inside.
